

## Water Softener Brine Alarm Salto

- Fully automatic low salt alert and salt fill reminder
- NC or NO Volt free contacts for alarm activation
- Raises alarm when salt needs replenishment
- Suitable for all water softeners
- Solid state sensor for durability and reliability
- Low cost and easy to install

Remembering to replenish the water softener salt need no longer be a problem with Lubron's new Salto unit. This clever device raises an alert via the volt free contacts whenever the salt has been used up. It functions by measuring the salt level, or conductivity, of the brine and the LED on the front display indicates the following:

**GREEN** The salt concentration in the brine is satisfactory, and the next regeneration will also be satisfactory

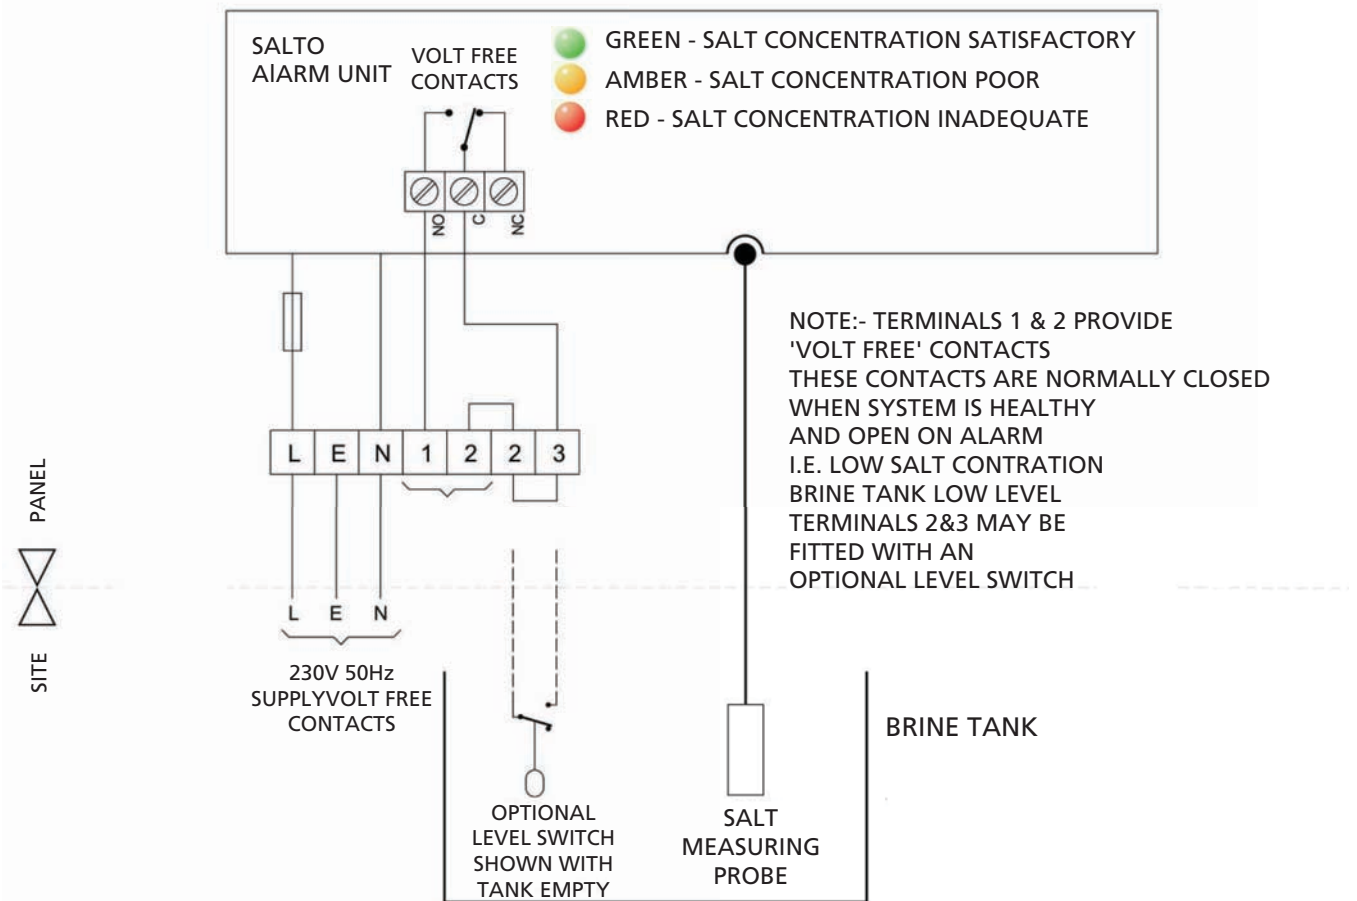

**AMBER** The salt level in the brine is no longer sufficient for a satisfactory regeneration and requires replenishment

**RED** The alarm signal will be fully activated and the salt will need immediate replenishment.

The Salto incorporates a 5 hour delay to allow freshly added salt to dissolve and produce the correct strength of brine. During the process the LED will automatically switch from RED to AMBER and then GREEN. If the salt concentration has not increased during this period the LED will stay at red and operate the alarm relay.

The salt measuring probe
