

SOLUTIONS Domestic Water Treatment

Untreated or poorly treated domestic and potable water systems cause problems in many installations. Among the most common are corrosion, the deposition of scale and microbial contamination. These lead to a reduction in the heat transfer rate, excessive water use, loss of heat production and eventually probable system failure. Microbial contamination can lead to the growth of pathogenic organisms as well as causing blockages, under deposit corrosion, unpleasant smells and tastes etc.

These problems can be avoided by using of our Domestic Water Treatment products. These form a unique facility, which combines conditioning products, dosing and control equipment, and is reinforced by our professional support during treatment. The result is water and energy consumption are greatly reduced while efficiency and longevity of your system are increased.

We are proud of our comprehensive service, confident that it is the best available.

Make Lubron your first choice for water treatment in your domestic water system.

Domestic Water Treatment

HOW IT WORKS

After a thorough appraisal of your water system by our specialist staff we will recommend a specific, optimised water treatment programme. This has four distinct focal points:

- To eliminate or control microbial contamination with special emphasis on Legionella control in compliance with L8
- To minimise any scale deposits and corrosion in your domestic water system
- To minimise water and energy consumption
- To ensure optimum efficiency and long-life to the system through regular service and on-going support by experienced technicians.

DOMESTIC WATER PRODUCTS

Resulting from extensive research and many years' experience we offer the following:

- Up-to-date conditioning and dispersant products to control sludge and scale
- The latest oxidising and non-oxidising biocides
- Dosing and control equipment, including remote monitoring and data logging
- Disinfection services
- On-line cleaning products
- Pre-treatment and filtration plant
- Paper or electronic log books
- Test kits

improvements wherever possible, taking note of costs and the return on investment generated.

LUBRON SUPPORT

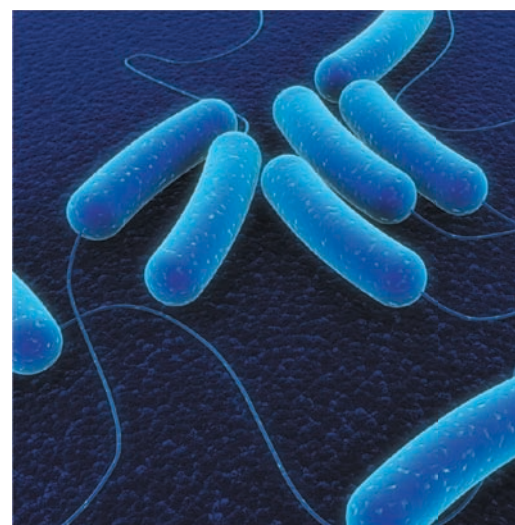

Lubron offer a total support package from survey through design, build, installation and application of the optimum technology to after sales service and support.

At Lubron we live for quality. We offer you comprehensive service and support – including analysis of your water and site inspections – in order to maintain your water treatment at an optimum and ensure compliance with regulations. You will also receive a detailed report and carefully considered advice after each site visit.

We will aim to provide the most cost effective solution whilst at the same time taking note of all the environmental issues.

The conditioning products are easily administered using our specially designed dosing and control equipment. In many instances, appropriate pre-treatment results in reduced consumption of water, energy and/or conditioning products. We will investigate and offer
