DOMESTIC

Removing minerals from the water you use in your home has a number of short and long term benefits, particularly if the water contains high levels of calcium and magnesium (hard water). Lubron will identify the best solution for the water in your home; to fit in with your lifestyle and environment.

CONSUMPTION

ENERGY EFFICIENCY

Significant levels of energy may be lost because of calcium deposits in many home applications, from water heaters and kettles to washing machines. The use of soft water minimises scale deposits and ensures devices function to their full potential.

CLEANING WITH SOFTENED WATER

When using softened water, less calcium deposits are left on tiles, taps, shower walls and toilet bowls, saving time and finances spent on cleaning, as well as reducing potential health risks.

EXTENDED EQUIPMENT LIFE

The limescale found in coffee machines, washing machines and on shower heads affects not only efficiency, but also the lifespan of equipment. By using softened water, calcium deposits are significantly reduced and therefore, the functionality of equipment is noticeably improved.

SOFT, CLEAN WATER

Using soft water can immediately bring noticeable improvements in various areas of a home, for example, reducing the amount of detergent and fabric softener needed when using a washing machine. In addition to direct cost savings, clothing items are less likely to lose their colour or shrink.
