LUBRON

WATER TECHNOLOGIES

At Lubron UK, we understand the unique requirements of the healthcare sector. We understand the need for durability and reliability in our products and services. We apply our knowledge and expertise to provide our customers with compliant equipment that we consider to be the best in the market.

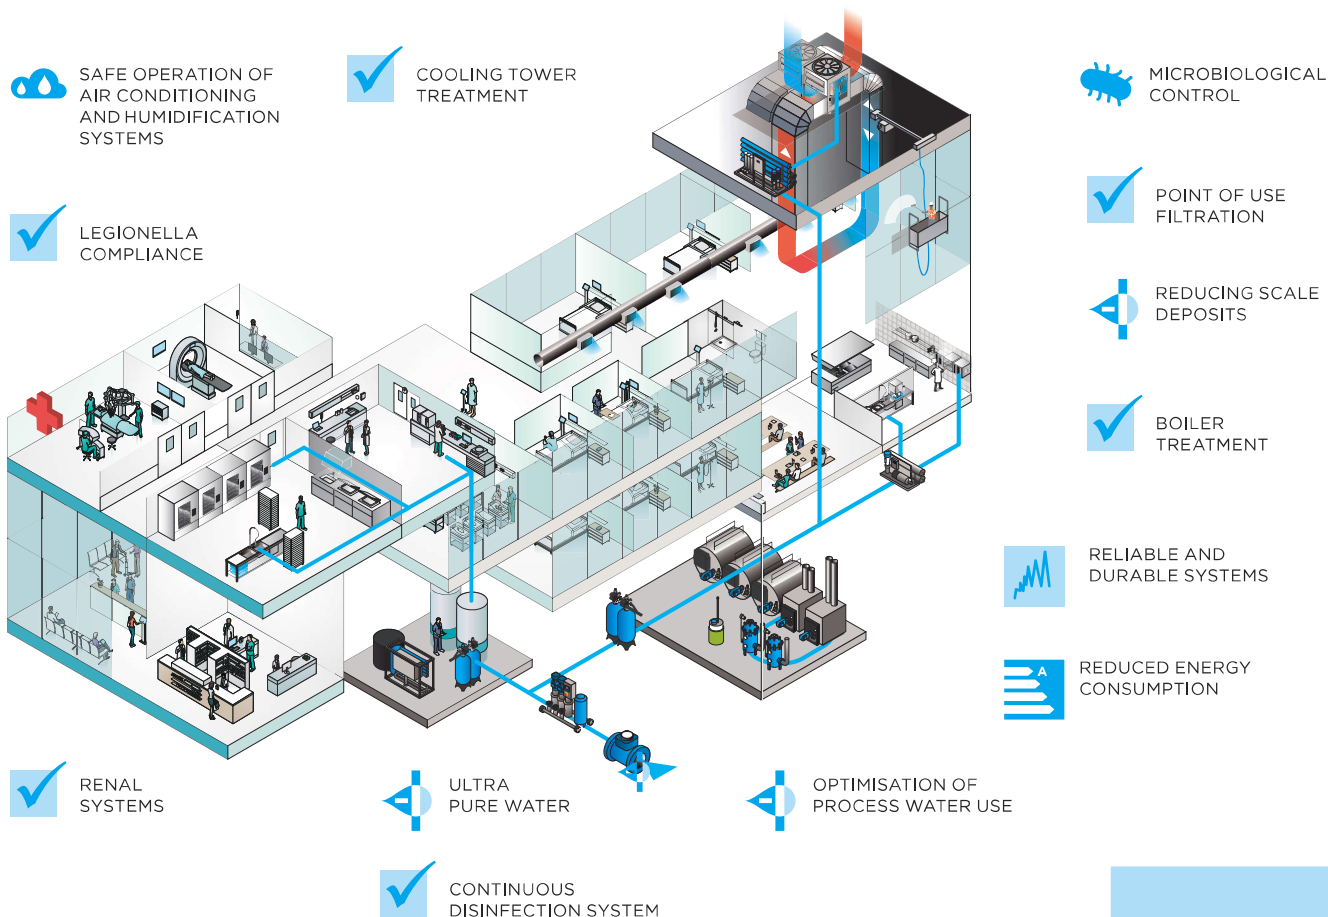

Lubron has a first-class reputation for providing fully compliant water treatment solutions for hospitals, pathology laboratories, and the pharmaceutical industry, from clinical decontamination and the water used in renal dialysis, to heating and chilled water systems. The fact that water treatment systems for these sectors must be technically advanced and utterly reliable to protect human life is realised by Lubron's expertise and scrupulous standards.

HEALTHCARE AND LIFE SCIENCES

Whether it is in hospitals, nursing homes or care homes, we understand that it is essential for our healthcare customers to have complete confidence in the quality of their water. With the correct water treatment, the risks of deposits, clogging and bacteria spreading in the system are minimised, and the service life is extended. Known for its excellent service, Lubron's maintenance provision for our customers is world-class. Our extensive service network provides 24/7 support for our clients.

SUSTAINABLE AND ENVIRONMENTALLY FRIENDLY

Improving energy efficiency is key to any organisation, and paramount in a healthcare setting. Heating costs represent a significant share of energy consumption in the sector and a sustainable building relies on efficient cooling and heating systems. By applying the correct water treatment, heat transfer can be optimised, saving money and reducing the carbon footprint.

HUMIDIFICATION (HVAC)

Water purity plays an important role here too, in helping to limit the risks from air and water borne infections. Lubron has invested in the research and development of specially designed units which deliver finely controlled humidification, vital for the provision of the right environment in theatres, wards and offices across healthcare facilities.

HOT AND COLD WATER SERVICES

Lubron designs, manufactures and maintains water treatment plant for both hot and cold water systems. With a range of solutions including softening, filtration, demineralisation using reverse osmosis, UV-disinfection and chlorine dioxide, Lubron will ensure your water is fit for purpose and compliant with all regulatory controls.

RENAL SYSTEMS

Treatment for renal conditions will always be a major requirement for any modern healthcare service. Renal dialysis water compliance standards are well established and Lubron's technical team brings high levels of expertise and experience to system design, supply, aftercare support and maintenance of well engineered water purification systems.
